2.2	Students and Trainees	2
2.3	Collaborators	2
3	Literature Map	2
3.1	Core Papers	3
3.2	Extensions	3
4	Research Directions	3
4.1	[Direction 1 Title]	3
4.2	[Direction 2 Title]	4

1 Scope

[One paragraph describing the purpose of this survey/report: whose work is being surveyed, what the goal is, and what research direction it supports. Mention which open problems you are trying to identify.]

2 People

This section introduces the researchers in the [Research Line].

2.1 Principal Investigators

- **[PI1] [PI Full Name]** ([website](#), [Google Scholar](#))
[Brief description of research focus and why this person is relevant.]

2.2 Students and Trainees

- **[S1] [Student Full Name]** ([website](#); [Year]–now PhD, [Institution])
Focus: [describe research focus].
Note. [Why this person and their work are directly relevant to your research direction. Be specific.]
- **[S2] [Student Full Name]** ([Google Scholar](#); [Year]–now PhD, [Institution])
Focus: [describe research focus].
Note. [Relevance note.]

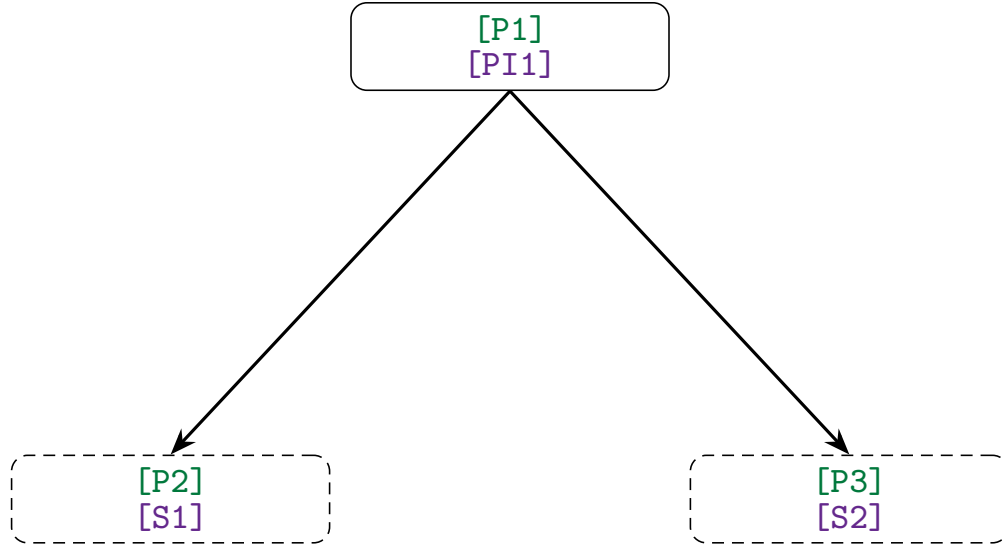

2.3 Collaborators

- **[C1] [Collaborator Full Name]** ([Google Scholar](#); [Institution])
Focus: [describe research focus].
Note. [Relevance note.]

3 Literature Map

[Narrative paragraph: how the papers in this line relate to each other and how they evolved. Use [...] to reference papers inline. For example: “The framework originated with [P1], which introduced X. Building on it, [P2] extended Y, and [P3] applied it to Z.”]

The citation graph below maps the dependency structure of this literature.

Arrow $A \rightarrow B$: B builds directly on A . Solid: core paper. Densely dashed: extension.

3.1 Core Papers

- **[P1]** [Author(s)]. *[Title]*. *[Journal or Conference]*, [Year]. [Publisher link](#) ([arXiv:XXXX.XXXXXX](#)).

Problem. [What problem does this paper address?]

Method. [What is the main technical approach? Include key equations if they are central to understanding the result.]

Result. [What is the main result? Be precise about what is proved and in which norm or setting.]

Limitation. [What assumptions or open questions remain?]

3.2 Extensions

- **[P2]** [Author(s)]. *[Title]*. *[Journal or Conference]*, [Year]. [Publisher link](#) ([arXiv:XXXX.XXXXXX](#)).

Problem. [...]

Method. [...]

Result. [...]

Limitation. [...]

- **[P3]** [Author(s)]. *[Title]*. *[Journal or Conference]*, [Year]. [Publisher link](#).

Problem. [...]

Method. [...]

Result. [...]

4 Research Directions

4.1 [Direction 1 Title]

[Describe the open problem. State clearly what the existing literature does not address. Explain how your tools, background, or perspective could contribute. Be concrete: name the specific model, equation, or mechanism you would study.]

4.2 [Direction 2 Title]

[...]
